Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

	Application No.	Applicant(s)			
	10/697,001	MATSUDA ET AL.			
Office Action Summary	Examiner ~	Art Unit			
	Tod T. Van Roy	2828			
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).					
Status					
 Responsive to communication(s) filed on <u>01 May 2007</u>. This action is FINAL. 2b) This action is non-final. Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i>, 1935 C.D. 11, 453 O.G. 213. 					
Disposition of Claims					
 4) Claim(s) 1-22 is/are pending in the application. 4a) Of the above claim(s) 2 and 8-21 is/are withdrawn from consideration. 5) Claim(s) is/are allowed. 6) Claim(s) 1,3-7,22 is/are rejected. 7) Claim(s) is/are objected to. 8) Claim(s) are subject to restriction and/or election requirement. 					
Application Papers					
9) The specification is objected to by the Examine 10) The drawing(s) filed on is/are: a) access applicant may not request that any objection to the Replacement drawing sheet(s) including the correct 11) The oath or declaration is objected to by the Examine	epted or b) objected to by the I drawing(s) be held in abeyance. See ion is required if the drawing(s) is ob	e 37 CFR 1.85(a). jected to. See 37 CFR 1.121(d).			
Priority under 35 U.S.C. § 119					
 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

The examiner acknowledges the amending of claim 1, cancellation of claim 3, and the addition of claim 22.

Response to Arguments

Applicant's arguments with respect to claims 1, and 3-7 have been considered but are most in view of the new ground(s) of rejection.

Claim Objections

Claims 4-7 are objected to because of the following informalities:

Claims 4-7 depend from cancelled claim 3.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 10/697,001

Art Unit: 2828

Claims 1, 3-7 and 22 are rejected under 35 U.S.C. 103(a) as being anticipated by Jacquet et al. (US 5283799) in view of Ishikawa (JP 02-137383, applicant submitted prior art) and further in view of (Giacomelli et al., "Noise enhancement of telegraph signals in vertical cavity surface emitting lasers," IEEE Quantum electronics conference, 10-15 Sept. 2000).

With respect to claim 1, Jacquet teaches a semiconductor laser reducing feedback-induced noise comprising: an active layer having a light amplifying region and a saturable absorber region (col.2 lines 60-66, col.6 lines 10-13) formed to allow said semiconductor laser to be in a bistable state (col.1 lines 16-17), an electrode of a first polarity (fig.1 E1), and an electrode of a second polarity provided in relation to said electrode of the first polarity (fig. 1 #2), at least one of said electrode of the first polarity and said electrode of the second polarity is divided to allow a current to be injected independently into said light amplifying region and said saturable absorber region (col.3) lines 4-10, 20-25). Jacquet does not teach controlling the hysteresis to adjust the lasing threshold of the laser, or the laser to produce an optical output modulated as a stochastic resonance (SR). Ishikawa teaches a bistable device wherein the hysteresis is controlled to adjust the lasing threshold (abs.). Giacomelli teaches a bistable laser that has an output modulated as a stochastic resonance (abs.) wherein the current is generated by superimposing a noise current on a modulation current (line 3), and the intensities are taught to be adjusted to increase amplitude of the optical output (lines 6-7, 17-18, and is taught to be optimized to the resonant point, line 5). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the

Application/Control Number: 10/697,001

Art Unit: 2828

bistable device of Jacquet with the bistable threshold controlled device of Ishikawa in order to obtain a large modulation optical output without a driver circuit (Ishikawa, abs.) and exert a higher degree of control over the device via adjustment of the threshold conditions, as well as to utilize the SR of Giacomelli in order to improve the quality of the output signal (Giacomelli, lines 1-4).

The current system taught by Jacquet, Ishikawa, and Giacomelli is the same as the detailed configuration of claim 1, and would therefor achieve the effect of reducing the feedback-induced noise.

With respect to claims 3 and 5, Jacquet and Ishikawa teach the bistable device as outlined in the rejection to claim 1, including the DC driving of the device, but do not disclose driving the device using a modulated signal with a superimposed noise current. Giacomelli teaches a method for operating a laser diode wherein a modulated current signal is superimposed with a noise current (abs.) having a random intensity change (white noise) is used to drive the device. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the device of Jacquet and Ishikawa with the driving current of Giacomelli in order to improve the quality of the output signal (lines 1-4), allowing for improvement of amplitude and reduction of feedback noise.

With respect to claim 4, Jacquet, Ishikawa and Giacomelli teach the bistable device as outlined in the rejection to claim 3, including the use of a sinusoidal modulated driving current representing ones and zeros (Giacomelli), but do not teach the modulated current to have a rectangular wave. It would have been obvious to one of ordinary skill in the art at the time of the invention to use a rectangular wave as the

Art Unit: 2828

modulation signal, as this type of wave is sinusoidal and is often used to represent binary signals.

With respect to claim 6, Jacquet, Ishikawa and Giacomelli teach the bistable device as outlined in the rejection to claim 3, and Jacquet further teaches the ratio of the absorber to be between 50% and 1% of the length of the resonator (fig.1 S2, col.6 lines 25-37)

With respect to claim 7, Jacquet, Ishikawa and Giacomelli teach the bistable device as outlined in the rejection to claim 3, but do not teach the difference between the maximum and minimum value of the noise current to be at most an amplitude of the modulation current. It would have been obvious to one of ordinary skill in the art at the time of the invention to sustain the noise current amplitude below that of the modulation current as doing otherwise would, in essence, change the noise current into the modulation current and vice versa (the noise current would then essentially be responsible for driving the device, with a small modulation signal added to it).

With respect to claim 22, Giacomelli teaches the noise signal to be superimposed on the modulation signal (including the maximum, or peak, of the modulation signal), and that stochastic resonance (SR) be used. Giacomelli further teaches the intensities to be adjusted to a resonant, or synchronized point (lines 3-5). The use of SR in this manner inherently controls the hysteresis of the system (please see US 5574369, col.1 lines 16-44, which describes how SR controls the hysteresis in a bi-stable system).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tod T. Van Roy whose telephone number is (571)272-8447. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Minsun Harvey can be reached on (571)272-1835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
